

# A system and method for providing Quality of Service in an Ethernet network.

5 Recommendation stack, an IP layer, and modular Generate QoS Ethernet and  
QoS Ethernet layers. The Generate QoS Ethernet layer is adapted to read Type of  
Service or Differentiated Service bytes and generate desired QoS Ethernet  
commands therefrom. Either the Generate QoS Ethernet layer or the QoS Ethernet  
layer may be replaced or modified without necessarily having to modify the H.323  
10 Recommendation stack and application program(s).
